

INSTALLATION

Mounting the unit is a snap. Just use the supplied template to cut a hole in your wall and fish the cabling up through the wall to the unit. If you're using Power over Ethernet, you'll only need one run of CAT5 cabling. If not, you'll also need to run the AC power adapter cable (supplied). Once the cable is connect, slip the back of the chassis into the hole and secure the mounting wings behind the sheetrock by turning the mounting wing bolts on the front flange.

Includes Touchscreen unit, mounting template, AC power adapter and quick-start guide
